Document 1: Circuit Analysis Fundamentals

Page 1 of 3: Introduction & Core Concepts

Welcome to the full-featured PDF.js and Hypothesis study environment.

This multi-page document demonstrates page navigation, zooming, and text selection.

Use the Hypothesis sidebar on the right to highlight any text on this page.

Section 2: Network Theorems & Laws

Page 2 of 3: Ohm's Law and Kirchhoff's Laws

1. Ohm's Law: The potential difference V across a conductor is proportional to current I .
2. Kirchhoff's Current Law (KCL): The sum of currents entering a node equals zero.
3. Kirchhoff's Voltage Law (KVL): The sum of potential drops around a closed loop is zero.
4. Thevenin's Theorem: Linear two-terminal circuits can be reduced to V_{th} and R_{th} .
